SOCE

The growing population and lack of medical facilities in Iran, especially in the peripheral areas of cities including Tehran (due to the concentration of such facilities in the central part of the city) the need to build facilities will be acutely felt. Taking into account the lands using treatment is a confirmation of this claim.

On the other hand, as technological and medical advances will improve the physical status of patients in addition to strengthening their spirit, the need for changes in the architecture of dental clinics and treatment spaces, which are usually dead and devoid of any diversity, is determined.

Considering these things, we tried to design this taking steps to solve the shortage of treatment spaces as well as creating a revolution in terms of the type of spaces created for dental clinics.

SOCE

The growing population and lack of medical facilities in Iran, especially in the peripheral areas of cities including Tehran (due to the concentration of such facilities in the central part of the city) the need to build facilities will be acutely felt. Taking into account the lands using treatment is a confirmation of this claim.

On the other hand, as technological and medical advances will improve the physical status of patients in addition to strengthening their spirit, the need for changes in the architecture of dental clinics and treatment spaces, which are usually dead and devoid of any diversity, is determined.

Considering these things, we tried to design this taking steps to solve the shortage of treatment spaces as well as creating a revolution in terms of the type of spaces created for dental clinics.
